

Qualification systems

The qualification system is used when purchasing strategic items with a high turnover, but also items with a limited turnover that have to meet technical requirements whose conformity can only be determined after extensive testing.

The list of existing qualification systems can be found below:

N°	Description of the qualification system
03-1	Braking blocks from gray cast iron P10
04	Braking blocks from phosphoric iron P30
10	Gears and gearwheels with hardened toothing
12	Monobloc wheels for rolling stock
16	Axles
22-1	Bearings for transmissions, axle boxes and traction engines
22-2	Paint system rail cars: solvent based epoxy polyurethane (direct gloss)
22-3	Paint system rail cars: solvent based epoxy polyurethane (base coat/clear coat)
22-4	Paint system rail cars: water based epoxy polyurethane (direct gloss)
22-5	Paint system rail cars: water based epoxy polyurethane (base coat/clear coat)
23	Paint system for rail cars: protection and decoration with powdercoating
24-1	Paint system for freight cars: fast drying Alkyd paints
24-1c	Cleaning products
25	Car wash cleaning products
31	Pieces in polyester resin glass fiber reinforced
32	Hydraulic dampers
33	Whole bay chassis for rolling stock
34-1	Rubber membranes for pneumatic suspension springs for railway rolling stock
34-2	Glazings for rolling stock (except mirrors and windshields)
37	Mirrors
40	Sliding strips for pantographs
42	Blue product for toilets
46	Ni-Cd accumulators for rail cars
48	Electrographitic brushes
50	Flexible structure to protect the passage of travellers between the rail cars
53	Front glasses (windshield)
55	Brake linings for the brake discs of conventional rolling stock
58	Oil for diesel engines
B-04	Cleaning product for the removal of graffiti from rolling stock
B-07	Brake linings for the brake discs of high speed rolling stock
B-09	Product to add to the cooling water of a diesel motor
B-10	Rubber hoses with nuances 3TB NG and 3TB EPDM
B-11	Alkyd resin based lacquers
B-13	Seat fabrics and curtains
B-14	Cleaning and chemical maintenance of seat covers and curtains
B-16	Supply of service cars to SNCB
B-18	Supply of graded sand for traction equipment
B-19	Half coupling for railway applications
B-20	Development of parks of photovoltaic panels
B-21	Led accumulators for locomotives Type 18
B-22	Welded structural parts of the SNCB rolling stock according to EN15085
B-23	Rewinding of armatures for DC traction engines

B-24	Professional support by outsourced technicians for repair of train parts in SNCB workshops
B-25	Strategic consultancy in order to improve the actual punctuality
B-26	Unplanned taxi rides to transport SNCB personnel and passengers in case of urgency
B-27	Service provider for procurement professionals
B-28	Fabrication of printed circuit boards possibly including assembly of components
B-29	Supply of flooring for passenger equipment
B-30	Electrical heating equipment for rolling stock
B-31	Rubber-based compressed air hoses for railway applications railway applications
